How to rename downloaded products to their original file names

Matheus Guilherme Brito - 2022-04-20 - Comments (0) - Phase 3 FAQs

Q: How can I rename the P3 products from their ADP names to the original file names?

A: In the case of files downloaded via the Request Handler, the correspondence between file-id and original file-name is mapped in the README file associated to each data request. The renaming commands can be extracted directly from the README file using the following shall command:

```
awk '/\- ADP/{ print "mv "$2, $3}' README_123456.txt
```

In some cases it can happen that during the downloading the ':' of the file name is replaced by a '_', if so, please use this other command line:

```
awk '/\- ADP/{ print "mv "$2, $3}' README_123456.txt | awk '{gsub(/\:/, "_", $2)}1'
```
