

How to prepare your observation in p2

Paola Popesso - 2022-04-20 - Comments (0) - How to prepare your observations (Phase 2)

How to prepare your observation in p2

The Observing Blocks can be prepared through our web-tool [p2](#). You can easily log in by using your User Portal credentials (yes! the same you used for accessing p1 and submitting your proposal and to check the web-letter).

After logging in, you will see that the instrument runs defined in your approved Phase 1 proposal now appear in your account. For each run you should prepare one or more OB to define the associated observation.

To guide you step by step, we have created a series of tutorials from the creation of a single and simple OB to more complex structures such as OB containers. Let's go in order. Follow link after link the following list of tutorials and you will become a pro of the ESO Phase 2!

- [p2 basic concepts and introduction](#)
- [How to create a single OB and its templates in p2](#)
- [I do not understand the template entries: look for info in the User and template manuals and tutorials](#)
- [How to set the observing constraints](#)
- [How to group my OB](#)
- [How to prepare a concatenation container](#)
- [How to create a time-link container](#)
- [How to use ObsPrep for my observation](#)
- [How to import a link of targets in p2](#)
- [How to generate the finding chart](#)
- [How to fill the read me](#)
- [How to conclude the observation in p2](#)
