How to migrate catalogues from ASCII to FITS format

Matheus Guilherme Brito - 2022-04-20 - Comments (0) - Phase 3 FAQs

**Q: How to convert an ascii file (table) to a fits file?**

A: You can perform the following steps:

1. Create a comma separated ascii table. For example if the table (cat1.txt) has $n$ columns separated by white spaces:
   
   ```bash
   awk '{print $1","$2","$3","$...,","$n-1","$n}' cat1.txt > cat2.txt
   ```

2. Convert the new table (cat2.txt) into a fits file using the **stilts** tool:
   
   ```bash
   stilts tcopy cat2.txt cat.fits ifmt=csv ofmt=fits-basic
   ```

   Usage:
   
   ```bash
   stilts <stilts-flags> tcopy ifmt=<in-format> ofmt=<out-format> [in=<table>] [out=<out-table>]
   ```

3. Add the missing header keywords according to the [ESO Science Data Products Standard](http://www.star.bris.ac.uk/~mbt/stilts/standard).

The STIL Tool Set can be downloaded from:

http://www.star.bris.ac.uk/~mbt/stilts/#install

For more information please check the following documentation:

http://www.star.bris.ac.uk/~mbt/stilts/
http://www.star.bris.ac.uk/~mbt/stilts/sun256/tcopy.html
