

Phase 3 - FAQ (Renaming downloaded Phase 3 products to their original file names)

Matheus Guilherme Brito - 2021-10-05 - Comments (0) - FAQs (Phase 3)

Q: How can I rename the P3 products from their ADP names to the original file names?

A: In the case of files downloaded via the Request Handler, the correspondence between file-id and original file-name is mapped in the README file associated to each data request. The renaming commands can be extracted directly from the README file using the following shell command:

```
awk '/\- ADP/{ print "mv "$2, $3}' README_123456.txt
```

In some cases it can happen that during the downloading the ':' of the file name is replaced by a '_', if so, please use this other command line:

```
awk '/\- ADP/{ print "mv "$2, $3}' README_123456.txt | awk  
'{gsub(/\:/, "_", $2)}1'
```
